

Exder ePrinter – because electronic invoices are easy and cost effective!

With Exder ePrinter you can send e-invoices directly from your business systems. Instead of printing your invoices on your desktop printer you choose the virtual printer Exder ePrinter. The invoice is converted to an electronic file which is immediately sent to your customer.

More and more companies require e-invoices

The number of companies and organizations who require electronic invoices are increasing every day. For example ICA, Coop, Axfood, and numerous authorities, municipalities and county councils are already attached to the Invoice Portal in order to receive electronic invoices. A current list of connected companies can be found at www.invoiceportal.net of course you can also use ePrinter for companies who are not connected to the Invoice Portal. Please contact us if you need any help.

Exder ePrinter is compatible with most invoicing systems

Exder ePrinter is easy to install and the license for one invoice layout can be used on multiple computers at no extra cost. The module works on most versions of Windows and on some Unix/Linux installations.

Invoice content requirements

Most clients have specific requirements on the content of invoices, such as cost center codes or reference codes. If your client is connected to the Invoice Portal, you can easily make a test invoice to see their requirements. Incomplete invoices will be stopped and you will quickly see what is required. If you have preprinted data on your invoices they can also be lifted into the e-invoice. It is often static information such as office address and bank account information. If you fill out this information in the license agreement, we will make sure to get them right on the e-invoices too.

Exder – a safe choice

Expert Systems has provided Exder since 1992. Over 1,000 European companies use the system to manage e-commerce with their most important customers. Axfood, ICA, Coop, Sandvik, Konsum Nord, Servera and several municipalities and county councils recommend their suppliers to use Exder for electronic trade. We cooperate with a range of market actors to facilitate easy connection.

The company Profile Support has been invoicing Axfood for almost a year with the help of Exder ePrinter. The project is beyond expectations. - Our costs are reduced. We avoid time-consuming mail handling. But above all it makes our client's process more streamlined. Meeting our customers requirements is a natural choice for us says Henrik Johansson, Marketing Manager at Profile Support.

Here's how Exder ePrinter works:

1. Print an invoice to Exder ePrinter from your business software.
2. Exder ePrinter converts the invoice and sends it to your customer electronically.
3. Every evening, you receive a report by e-mail listing all invoices sent.
4. Simple as that!

Ordering Exder

You can either order Exder ePrinter through our website by registering you as a user, or fill out an order form and send it to Expert Systems.

ePrinter - just as easy to use as a desktop printer

Getting started with Exder ePrinter

A big advantage with Exder ePrinter is that you don't have to install any software on your computers. Neither do you have to get any additional licenses if you want to send invoices to multiple customers. This makes ePrinter a long term and cost efficient solution.

How to do

Go to www.expertsystems.se and sign up for a ePrinter license.

If your customer is connected to the Invoice Portal you can start with sending an invoice through the web form in the Invoice Portal and compare the customer's requirement with your ordinary paper invoice.

You'll receive your login and installation instructions by email.

Install the printer Exder ePrinter on all clients from where you want to be able to send e-invoices.

Print a range of test invoices via Exder ePrinter.

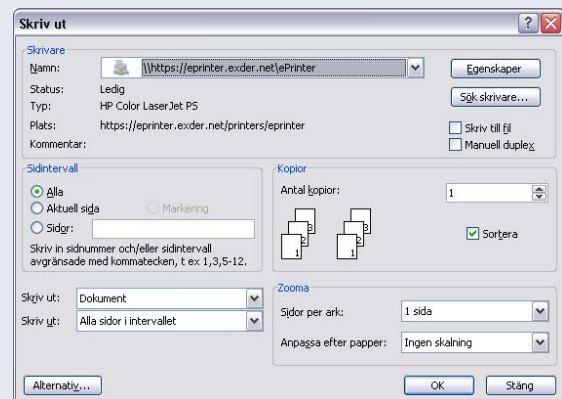

We match your invoice layout and your customer's requirement on the layout.

We'll inform you when it's clear to send sharp e-invoices to your customers.

You can also email pdf-invoices to ePrinter and we'll convert them to electronic invoices.

How it works

1. In your ordinary invoice system choose print invoice but use the printer "ePrinter". A picture of the invoice will be sent electronically and encrypted through Internet to our servers.

2. Exder ePrinter will convert the invoice and send it electronically to your customer in the right format and with the information according to your customer's requirement.
3. If your customer is connected to the Invoice Portal you will receive a receipt that the invoice has passed your customer's requirements and if not you'll receive information that the invoice needs to be completed.
4. Every night a transmission report with information about sent invoices is mailed to you.
